

Interview Framework – Agentic AI Developer

Role

Agentic AI Developer

Interview Instructions

This document contains structured interview questions for the General Administrator role.

Questions are designed to assess:

- Understanding of agentic AI concepts and architectures
- Applied use of large language models (LLMs) and tools
- Problem-solving and systems thinking
- Experience designing autonomous or semi-autonomous workflows

Familiarity with responsible AI and modern AI delivery practices

The interviewer must:

- Ask one question at a time.
- Allow the candidate to answer fully before moving on.
- Not reveal scoring criteria.

Question 1 – Experience

How many years of experience do you have building AI Agents or autonomous workflows?

Question 2 – Deployment History

Have you deployed an agentic AI system to production? (Yes/No)

Question 3 – LLM Experience

Have you worked with LLM frameworks that support tool calling or agents? (Yes/No)

Question 4 – Guardrail and Hallucination Mitigation Experience

Do you have experience implementing guardrails or hallucination mitigation? (Yes/No)

Question 5 – Integration and API Experience

Have you integrated AI agents with external APIs or enterprise systems? (Yes/No)

End of Interview

After Question 5, the interview session is complete.
